VOYAGE

TRAVEL AGENCY

PROJECT PRESENTATION

Curated *Journeys*

A full-stack travel agency website built with Python and Django.

Presented by Aditya Ramesh Vispute

Godavari College of Engineering and Polytechnic

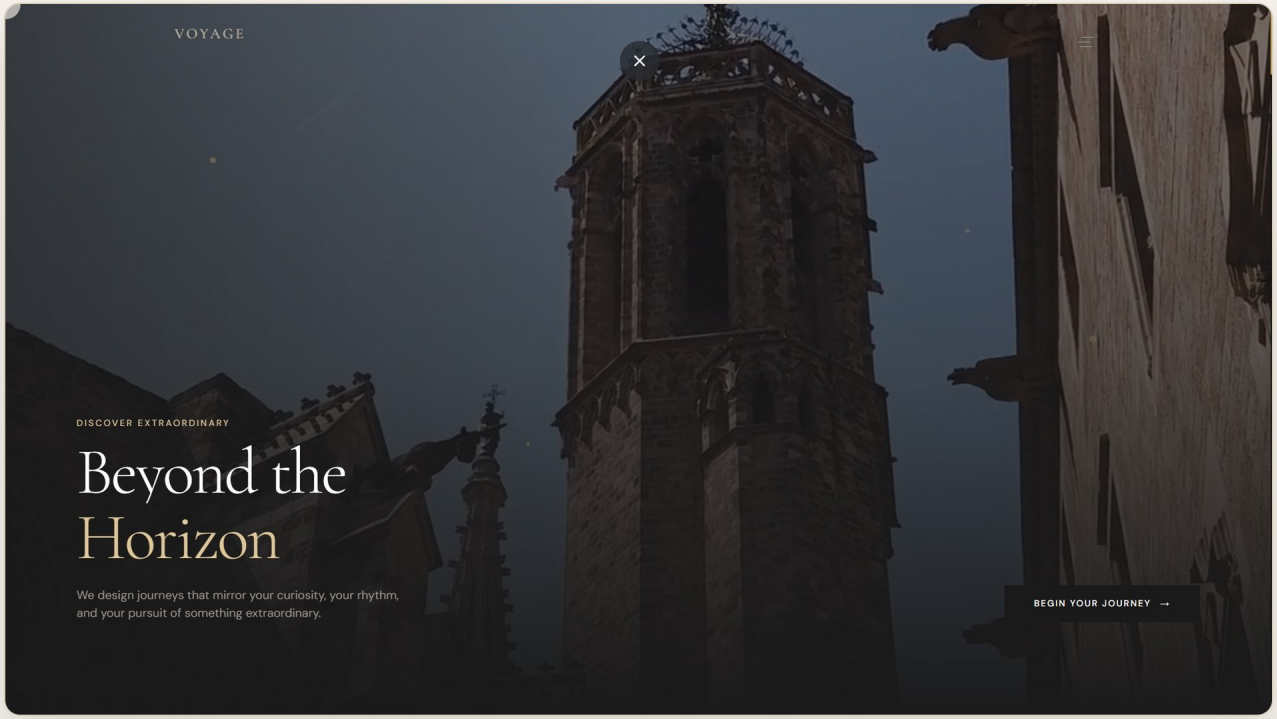

Guide: Prof. Titiksha Zope

INTRODUCTION

Project Overview

- A database-driven travel agency website for exploring destinations and tours.
- Travellers can register, book a curated or personalised trip and follow its status.
- Django powers the backend; HTML, CSS and JavaScript shape the experience.

The VOYAGE homepage: a cinematic hero with a clear call to action.

INTRODUCTION

Problem Statement

Scattered information

Travel details are spread across many platforms.

Hard to choose

Travellers need an easy way to explore destinations and tours.

Unorganised bookings

Booking details and preferences need one clear home.

Generic interfaces

Ordinary sites lack a consistent, engaging experience.

THE SOLUTION

VOYAGE

One platform to discover, book and manage trips.

INTRODUCTION

Project Objectives

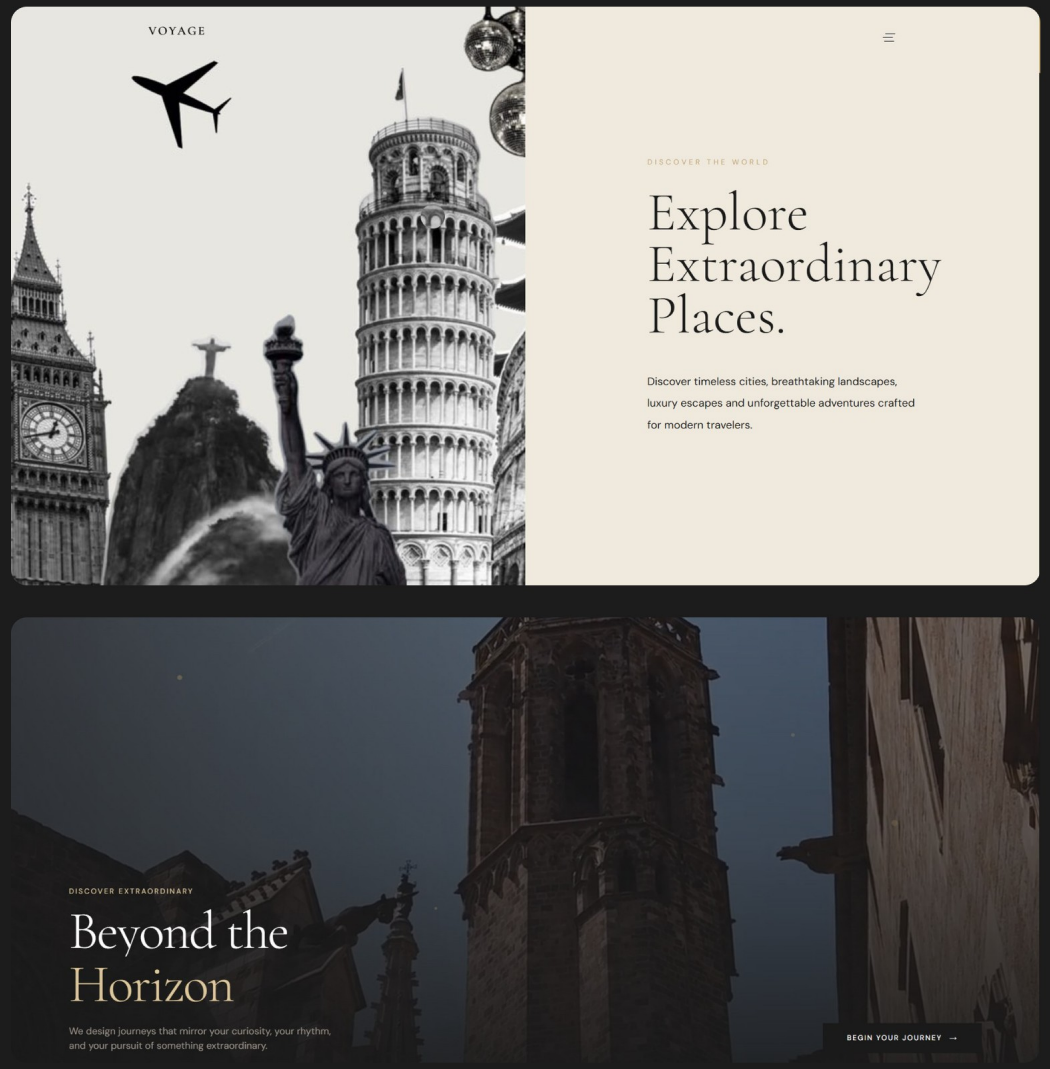

- Build a functional travel agency website
- Display destinations and tour packages
- Support accounts and booking workflows
- Manage website data through Django
- Deliver a consistent, premium experience

INTRODUCTION

Brand Identity and Design Philosophy

- Luxury travel positioning: discovery should feel premium.
- Elegant serif headlines with clean sans-serif body text.
- Large photography and editorial page composition.

Ivory · gold · sand · charcoal

HOW IT IS BUILT

Project Scope and Requirements

For travellers

Browse destinations and tours

Register, log in and manage a profile

Book a curated or personalised journey

Follow payment and booking status

Leave reviews and ratings

For administrators

Manage destinations and tours

Review and update bookings

Edit site content and contact details

Maintain testimonials, blogs and experiences

All handled in the Django Admin panel

HOW IT IS BUILT

Technology Stack

Python
Main programming language

Django
Routing, views, forms, auth and admin

HTML
Page structure and templates

CSS
Styling, layout and effects

JavaScript
Interactive components

SQLite
Relational database

Django ORM
Python models talk to the database

Git and GitHub
Version control

HOW IT IS BUILT

System Architecture

Response: Django renders a template with the data, and the browser shows it with CSS and JavaScript.

Django Project Structure

- Separate apps keep features apart.
- Templates hold the HTML; static files hold CSS and JavaScript.

```
VOYAGE/
    config/          Settings and project routing
    apps/            Django applications
        core/            Destinations, tours,
                         site content
        booking/         Booking and payment logic
    templates/       HTML pages
    static/          CSS, JavaScript, images
    manage.py        Django command-line tool
```

HOW IT IS BUILT

Database Design and Models

Destination
Location, description, images and details

1 : N

Tour
Price, duration, itinerary and seats

1 : N

Booking
Traveller details, dates, preferences, booking and payment status

1 : N

User
Django account, profile and journeys

1 : N

Review
Rating and traveller story for a booking

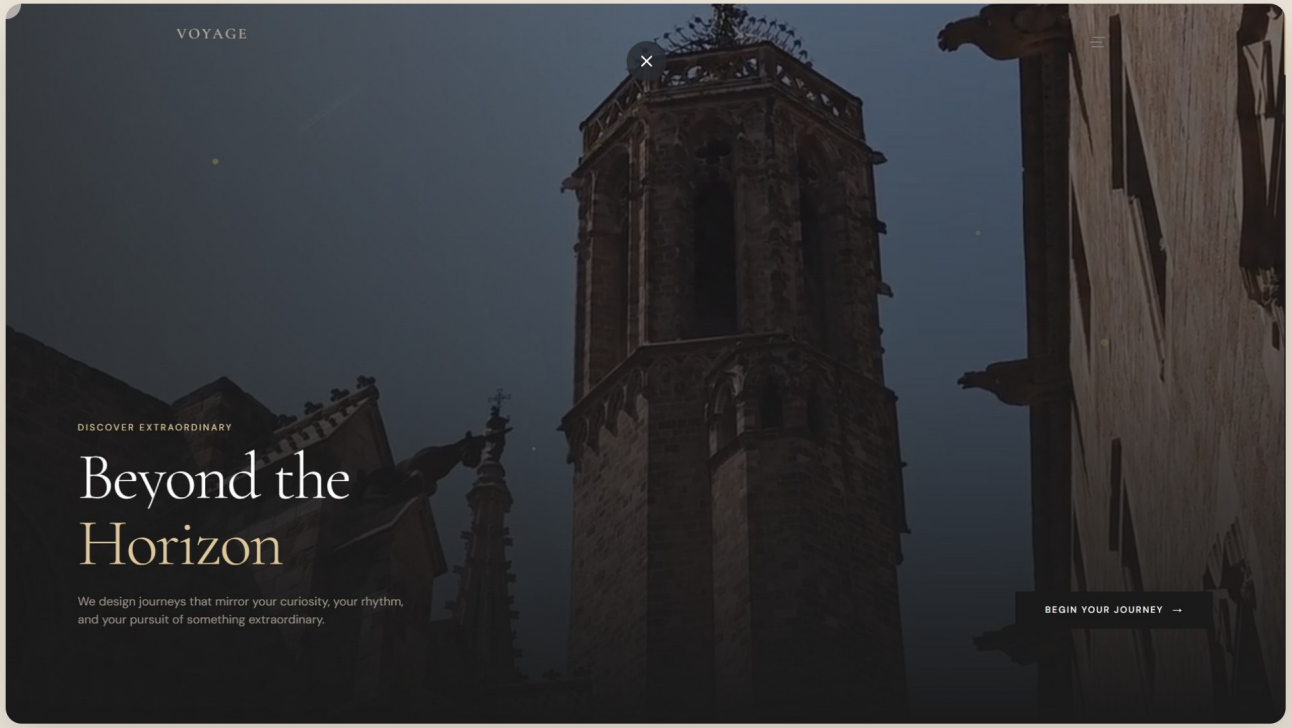

Site content models
SiteSettings · Experience · Testimonial · Blog

The Django ORM maps each model to a database table.

THE WEBSITE

Homepage and Website Experience

A cinematic hero, a clear call to action and a curated destination grid.

THE DESTINATION PAGE

Destination Discovery

- Visual browsing of destinations
- Editorial layout with a landmark collage
- Detail pages with photos and information

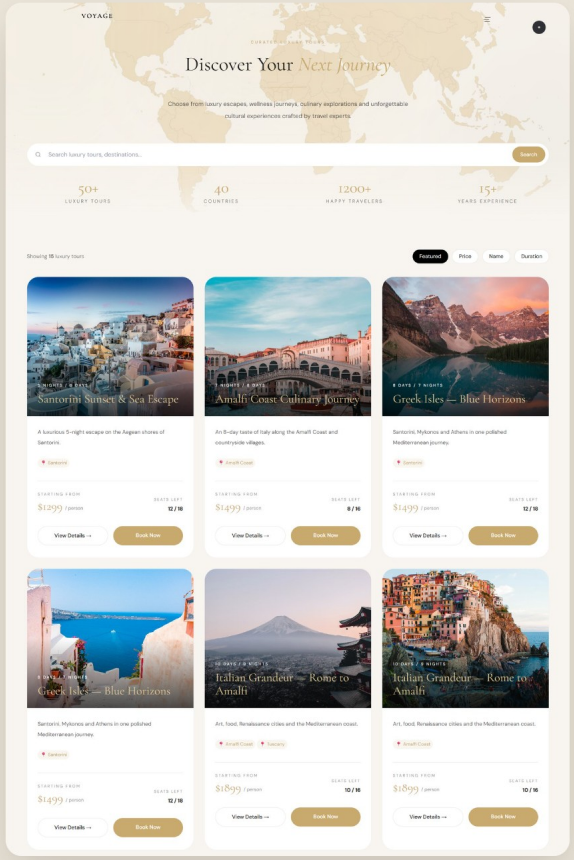

The destinations page opens with an editorial split layout.

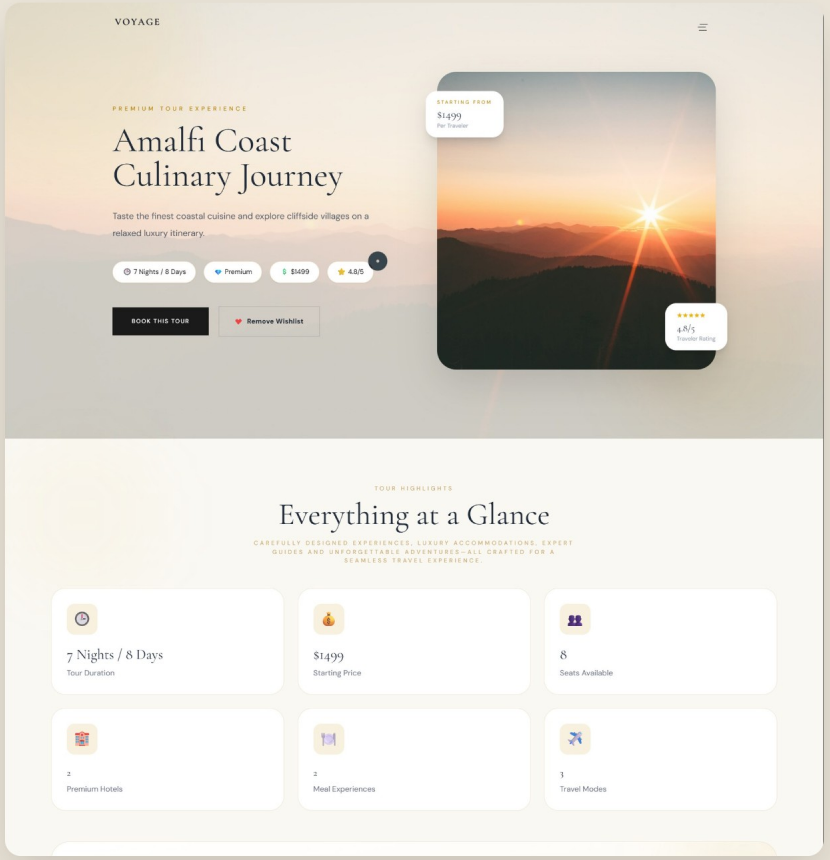

THE TOURS PAGE

Tours and Travel Experiences

- Tour cards with price, duration and seats left
- Detail pages with a day-by-day timeline
- Book now and wishlist actions

Tour listing

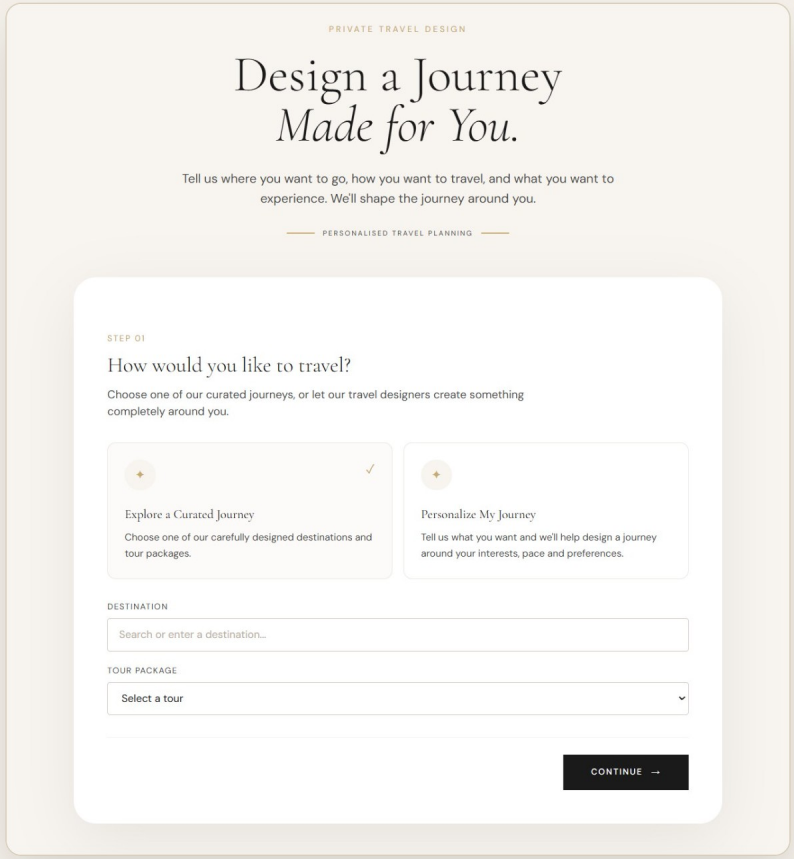

Amalfi Coast Culinary Journey

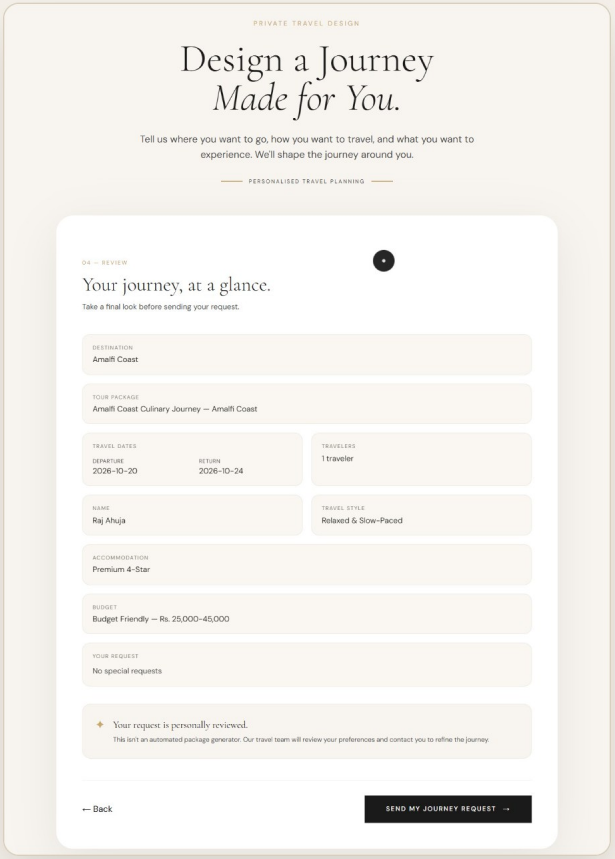

CHOOSING THE JOURNEY

Booking and Trip Personalization

- Choose a curated tour or a personalised journey
- Capture dates, travellers, style and budget
- Review everything before sending

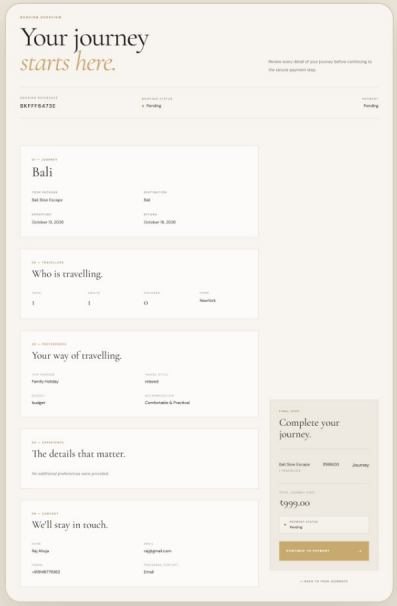

Step 1: choose how to travel

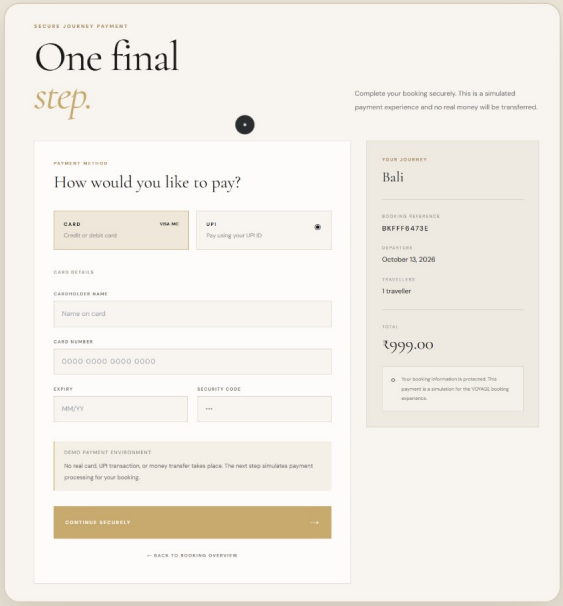

Final review step

Payment and Booking Confirmation

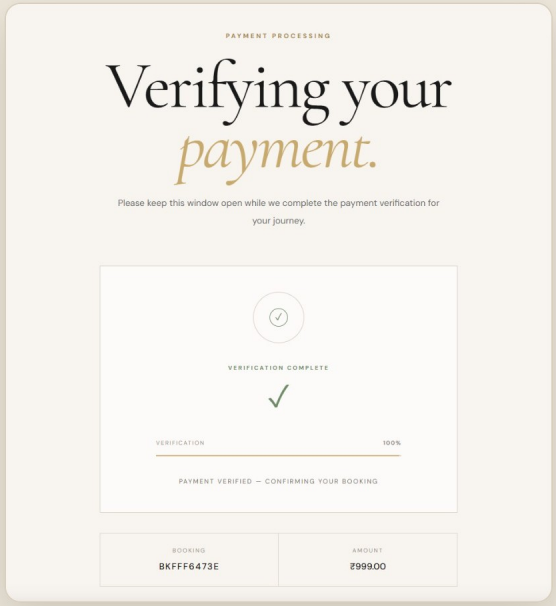

A simulated payment workflow: no real money is transferred.

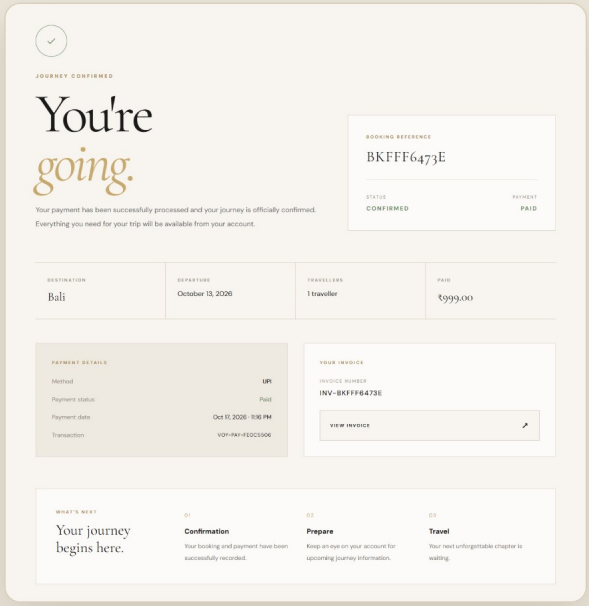

1 · Booking overview

2 · Payment method

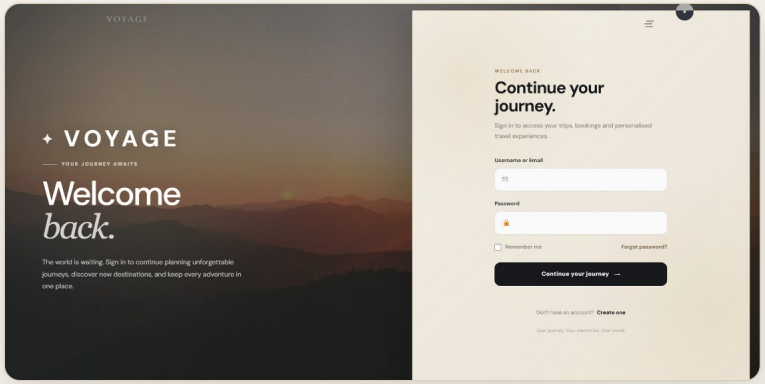

3 · Verifying payment

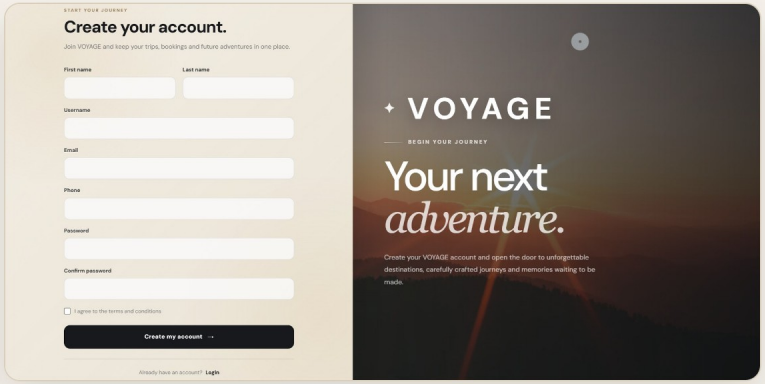

4 · Journey confirmed

User Accounts and Trip Management

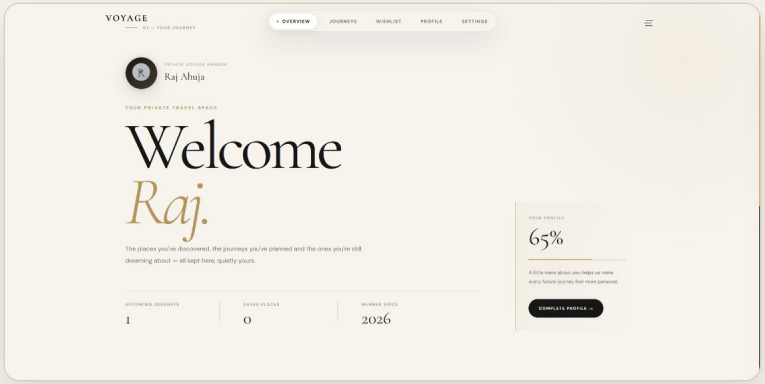

- Registration and login
- Profile and booking history
- Journey archive with reviews

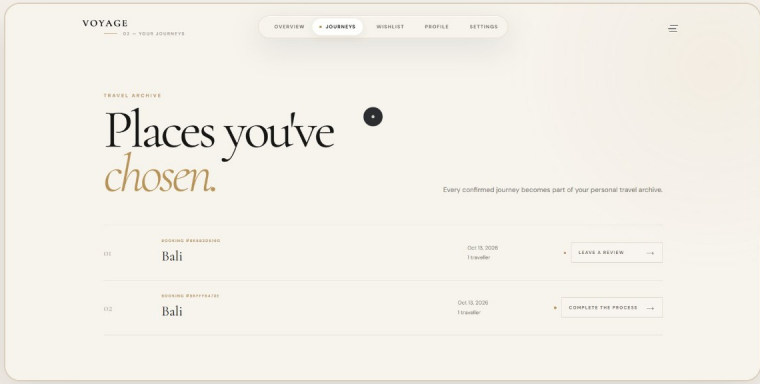

Login

Registration

Profile overview

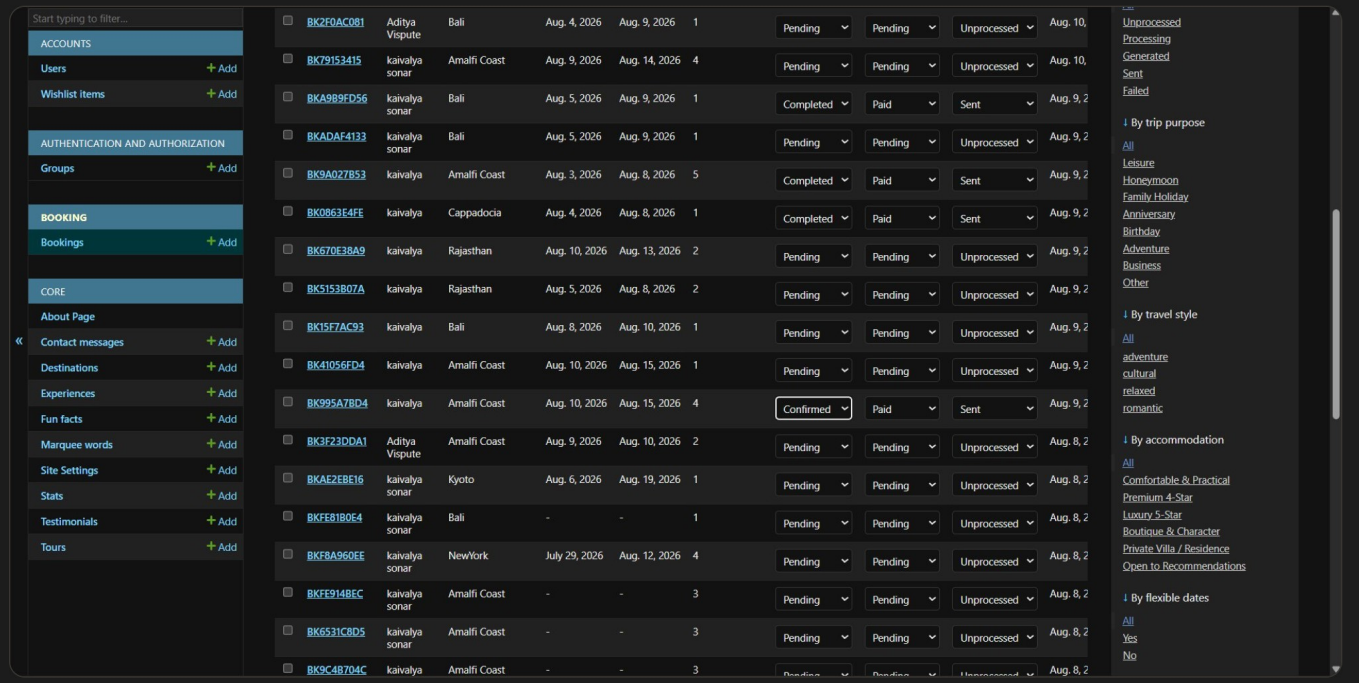

Journey timeline

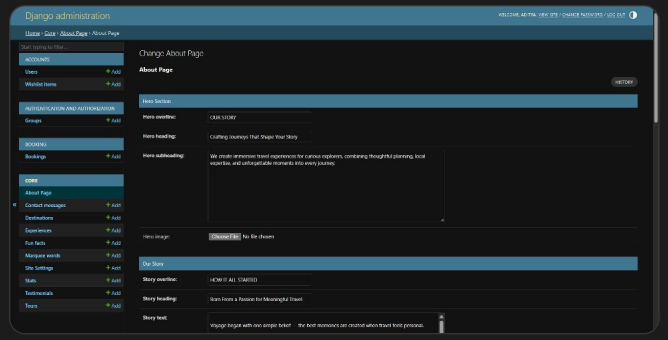

ADMIN PANEL

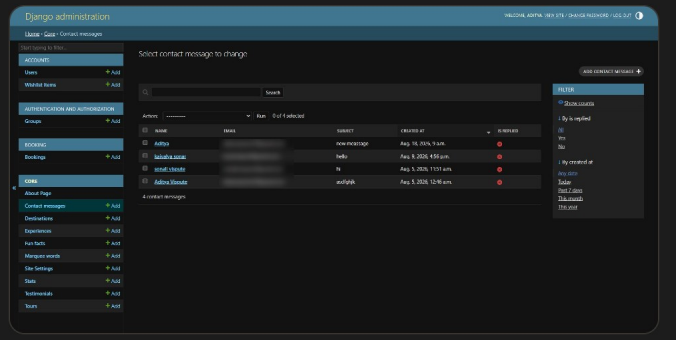

Backend Administration

- Update booking and payment status from one list
- Edit the About page and site content without code
- Read contact messages from travellers

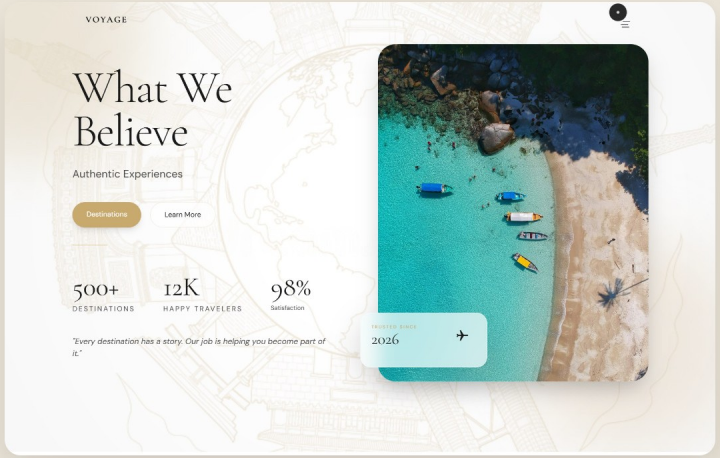

Django's built-in admin, managing 14 models including Users, Bookings, Destinations and Tours.

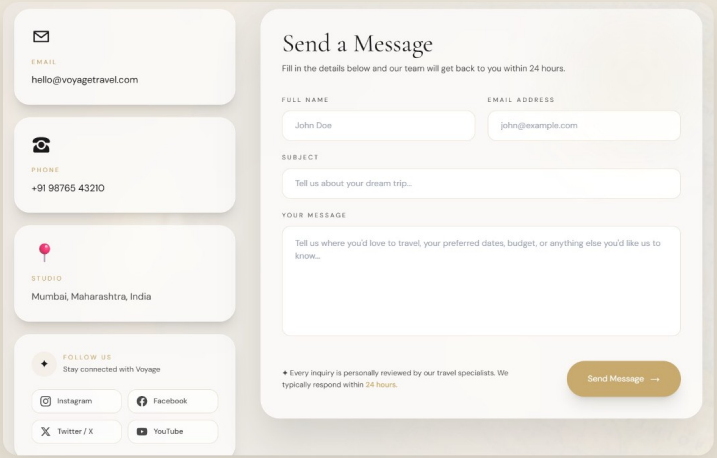

UI/UX Design and Supporting Pages

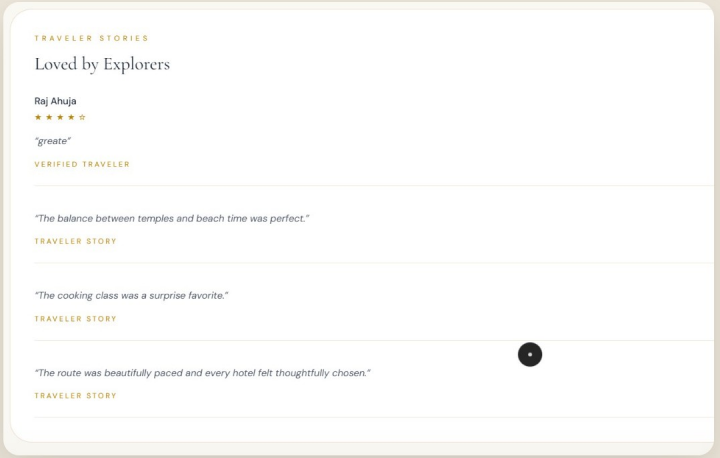

About

Brand story, mission and core values

Contact

An enquiry form with contact details

Reviews

Star ratings and traveller stories

Testing, Challenges and Future Scope

Tested

Full flow: tour, booking, payment, confirmation

Booking and payment status at each step

Journeys and reviews shown on the profile

Challenges

Separating booking status from payment status

One premium design across many pages

Modelling a multi-step booking in Django

Future scope

Real payment gateway and email notifications

Automated tests and production deployment

Smarter trip planning and booking reports

CONCLUSION

Thank You *Questions?*

- A full-stack travel agency website built with Django
- Discovery, booking and accounts on one platform
- Next: a real payment gateway and automated tests
